

EarthBond Terrazzo

CarpenterStone's EarthBond Terrazzo is a new solution for a classic aesthetic. EarthBond Terrazzo is a dense, fiber-reinforced engineered cementitious composite that can be applied in a thinner coating than traditional cementitious terrazzo. And, it's simpler and easier to mix and apply than traditional epoxy-based terrazzo. Also, due to the fact that there are no epoxy resins in the material, no dangerous chemicals and fumes are given off during installation. Consequently, the material is safer and more environmentally friendly. With no epoxy resin to breakdown in the direct sunlight, the mixture can be used in both interior and exterior applications.

It's something that you know, understand, and have experience with. Only the results are different.

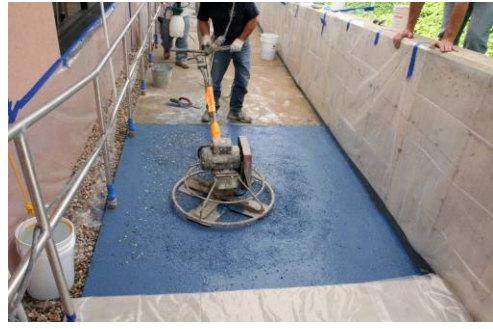

EarthBond Terrazzo

- Follow traditional terrazzo installation procedures
- Can be mixed with a jiffy mixer or in a standard concrete or mortar mixer, and
- Add selected specialty aggregate and color as desired
- Uses the same grinding and polishing tools

The mix

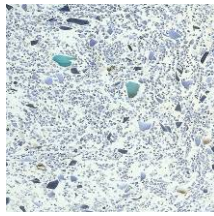

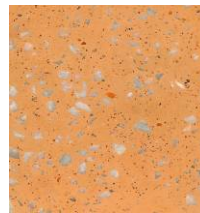

- Easy to use
- Faster to install
- Superior bonding strength
- Can be applied as thin as 3/8"
- Has high tensile and flexural strength
- Contains **no co-polymers, acrylics, or epoxy resins**
- Environmentally friendly, **no VOCs.**
- Interior and exterior installations

Use all the same tools and methods that you are accustomed to using.

Limitless Colors and Textures

The textures and colors that can be obtained are limited only by your imagination. By experimenting with a wide range of colors and various types of aggregates such as glass, mica, pea gravel, shells, and ground stones, you can get exactly the design that you desire. Below are a few samples of the various looks that can be achieved.
