

EarthBond Pre-Slope

EarthBond Pre-Slope Technical Data

Coverage

1 bag = 15 sq. ft. @ 1/2" Thickness

Standard Pre-Slope Technical Data

Compressive Strength.....(C170) 7,000 PSI

Material Density.....145 lbs./cu. ft.

Lightweight Pre-Slope Technical Data

Compressive Strength.....(C170) 3,500 PSI

Material Density.....90 lbs./cu. ft.

CarpenterStone's EarthBond Pre-Slope is a two-component system that takes the guesswork out of delivering consistency...mix after mix after mix.

This engineered cementitious composite needs nothing else to be added and contains no co-polymers or epoxy.

EarthBond Pre-Slope

A revolutionary one-step drainage solution for balconies, pool decks, patios, roofs, and more...

carpenterstone®
Improving Products through Advanced Material Science

CarpenterStone's Pre-Slope products provide a superior one-step drainage solution for balconies, pool decks, patios, roofs and more. The mixes produce a no slump consistency with the ability to easily screed or trowel to the exact pitch or slope desired.

Each product is formulated to provide excellent bonding to virtually any substrate, including concrete, membrane, drainage mat or primer. Utilizing advance fiber technology provides high flexural strength and serves to reduce potential shrinkage and cracking.

EarthBond Pre-Slope prevents contact between water and the concrete providing a hydrophobic composite without the means of conventional membrane systems, or can be used in conjunction with virtually any membrane system to speed installation and maximize the water resistance of the overall system.

EarthBond Pre-Slope products contain no co-polymers, acrylics or epoxies thus allowing the installation to move quickly without extended drying times. Further, since the products have no VOCs, hazardous chemicals or caustic odors, the application can be used for both exterior and interior projects.

EarthBond Pre-Slope

CarpenterStone's EarthBond Pre-Slope products are revolutionary, easy to use applications that save time and money over other solutions.

- ▶ Two-part system; no water required
- ▶ Zero slump
- ▶ Build from 5" to feather
- ▶ Excellent adhesion to virtually any substrate
- ▶ Fiber reinforced
- ▶ No co-polymers or epoxy resins
- ▶ Water resistant with low permeability

EarthBond Lightweight Pre-Slope

CarpenterStone's EarthBond Lightweight Pre-Slope provides all of the advantages of our Standard Pre-Slope and more. EarthBond Lightweight is approximately 40% lighter than traditional cementitious products. By utilizing recycled micro and nano glass as one of the aggregates, we are able to lower the weight, increase fire resistance and further enhance its green attributes. EarthBond Lightweight is perfect for projects that require lighter weight solutions, such as renovation projects and upgrades of existing balconies, roofs, and decks.
